Features:

BIGTREETECH Octopus V1.1 Control Board – Powerful 32-Bit 3D Printer Motherboard

The **BIGTREETECH Octopus V1.1** is a feature-rich, high-performance 3D printer motherboard designed for demanding DIY builds, including the popular **Voron 2.4**. Powered by a 32-bit **ARM Cortex-M4 STM32F446ZET6** processor running at **180MHz**, it delivers smooth, reliable performance with excellent compatibility for both **Klipper** and **Marlin** firmware.

【Optional Main Control Chip】Uses 32-bit ARM Cortex-M4 series STM32F446ZET6 or STM32F407ZE main control chip. The two chips support Marlin and Klipper with high frequency.

【Strong DIY Support】This motherboard supports up to 8 stepper drivers with 9 stepper driver outputs in total; And up to 6 PWM fans and 2 always-on fans with the ability to individually select the voltage rail that will drive each fan. Select from Vin, 12V or 5V.

【Motherboard Expansion Function】Support BLTouch, locked-rotor detection, shut down after printing, resume printing after power failure, CAN bus, U disk function, IIC expansion; at the same time reserved WIFI interface, PT100 thermistor interface (optional), dual Z-axis printer.

【TMC2209 Driver Features】The TMC2209 stepper driver is not easy to lose steps and is in an ultra-quiet mode; the module has a large area of heat dissipation pad, which can reduce the temperature of the driver when it is working; the module supports three modes: STEP / DIR and UART.

【TMC2209 Driver Mode】TMC Motor drivers can be used in SPI or UART mode by simply adjusting the onboard jumpers beneath each motor driver. Additionally, you can connect or disconnect the TMC DIAG pin using an onboard jumper allowing you to use hard end-stops or sensorless homing without the need to cut any pins.

Specification

Size:
160*100mm

Mounting size:
150*90mm

Microprocessor:
ARM 32-bit Cortex™-M4 CPU

Input voltage:
DC24V

Motor driver:
pluggable drivers

Drive working mode support:
SPI, UART, STEP/DIR

Firmware support:
Marlin, Klipper

Motor driver sockets:
MOTOR0, MOTOR1, MOTOR2_1, MOTOR2_2, MOTOR3, MOTOR4, MOTOR5, MOTOR6, MOTOR7

Temperature sensor interfaces:
TB, T0, T1, T2, T3

Display interfaces:
BIGTREETECH TFT touch screen, LCD12864, LCD2004, etc.

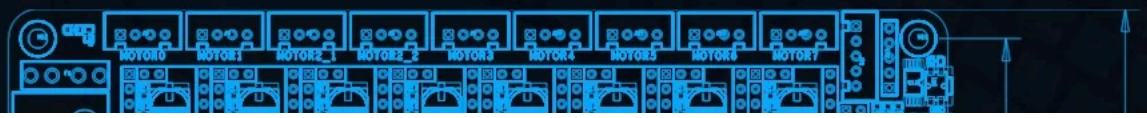

PC communication interfaces:
USB-C with configurable BAUD

Expansion interfaces:
Fil-DET, PWR-DET, PS-ON, BL Touch, etc.

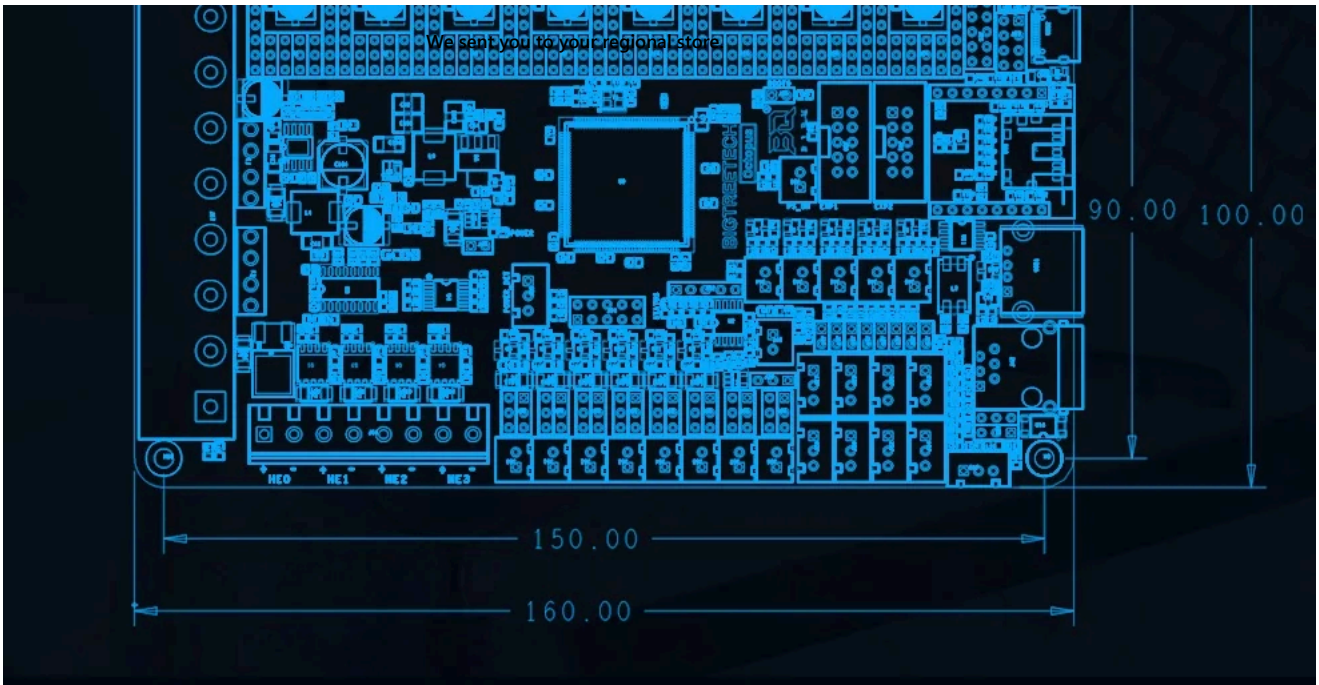

Command file format support:
G-code

Recommended slicing/interface software:
Cura, Simplify3D, Pronterface, Repetier-host, Makerware

Solid board

I'm finally doing my first print on my new Trident. One of the only things I had no issues with is this board. I feel like it has more features and room to grow than I'll ever be able to use.

Greg Verified

Super fast Shipping, fantastic product

Everything works fine, received the board after 10 days in switzerland in a stable package. Quality of the board is exzellent and you will find a lot of information in the internet how to use it.

It just works

I now have the same control board on all my printers.
